

Reč urednika

Editor's note

Poštovane kolegice i kolege, dragi saradnici,

Dear colleagues and associates,

Sve veće interesovanje kolega različitih specijalnosti koji uzimaju učešće u radu i razvoju našeg časopisa jeste ogledalo neprestanog i snažnog progressa medicinske struke i nauke u našoj zemlji, ali istovremeno predstavlja bitan doprinos našoj opštoj medicinskoj literaturi. Razvoj nauke moguć je samo slobodnom razmenom ideja, saznanja, rezultata i projekata, a sve to zajedno unapređuje kvalitet istraživanja u oblasti medicinskih nauka i svakodnevne kliničke prakse.

Uredništvo časopisa se zahvaljuje svim autorima na motivaciji i angažovanju, kao i recezentima koji su kompetentnim i temeljnim recenzijama doprineli održavanju kvaliteta „Medicinske reči“ i kontinuiranoj dinamici objavljivanja novih brojeva. Uspeli smo da održimo dinamiku izdavanja časopisa od 3 broja godišnje, i nadamo se da ćemo u narednom periodu napredovati kao tim. Dobra komunikacija i otvoren odnos kolega stvaraju plodno tlo za napredak i uspešnu saradnju.

Dalji ciljevi uredništva časopisa su poboljšanje kvaliteta radova, podsticanje kolega koji se do sada nisu bavili naučno istraživačkim radom da se oprobaju u tome, ali i povezivanje i saradnja sa drugim časopisima i uvrštavanje u referentne baze podataka. Radoznalo ćemo i dalje tragati za novim saznanjima.

The growing interest of colleagues from different specialties who take part in the work and development of our journal is the reflection of the continuous and strong progress of the medical profession and science in our country, but at the same time it represents an important contribution to our general medical literature. The development of science is possible only through the free exchange of ideas, knowledge, results and projects, all of which together improve the quality of research in the field of medical sciences and everyday clinical practice.

The editorial board of the journal would like to thank all the authors for their motivation and commitment, as well as the reviewers who, with their competent and thorough reviews, contributed to maintaining the quality of “Medical Word” and the continuous dynamics of publishing new issues. We have managed to maintain the dynamics of publishing the journal of 3 issues per year, and hopefully we will progress as a team in the coming period. Good communication and an open relationship between colleagues create fertile ground for progress and successful cooperation.

Further goals of the journal editors are to improve the quality of papers, to encourage colleagues who have not been involved in scientific research work to try it, but also to connect and cooperate with other journals and include them in reference databases. We will continue to search for new knowledge with curiosity.
